Update

ChatGPT

you have to find stations which does not line on pink line

ShareGA

To find stations that do not lie on the Pink Line, you can use the following SQL query:

sqlCopyEdit

```
SELECT DISTINCT st_code
FROM station
WHERE st_code NOT IN (
  SELECT st_code
  FROM station
  WHERE line_color = 'Pink'
);
```

Explanation:

1. The subquery:

sqlCopyEdit

```
SELECT st_code FROM station WHERE line_color = 'Pink'
```

Retrieves all stations that belong to the Pink Line.

2. The outer query:

sqlCopyEdit

```
SELECT DISTINCT st_code FROM station WHERE st_code NOT IN (...)
```

ChatGPT can make mistakes. Check important info.

Here LLM makes a mistakes and writes a query which returns stations s3, s6,s8,s9 but s3 and s6 does lie on blue and pink lines respectively.

Now the LLM rectifies its mistakes and gives a corrected query.

The output returns S3
S6
S8
S9 But s3 lies on blue as well as red which means it should not be included in the answer. Also s6 lies on pink as well as red which means it should not be included. Which means query is wrong

Got it! You need to find stations that **do not** belong to either the Pink or Blue lines at all (i.e., they must not appear in the `station` table with `line_color = 'Pink'` or `line_color = 'Blue'` at any point).

Corrected Query

```
sql
SELECT DISTINCT st_code
FROM station s1
WHERE NOT EXISTS (
  SELECT 1
  FROM station s2
  WHERE s1.st_code = s2.st_code AND s2.line_color IN ('Pink', 'Blue')
);
```

Explanation:

1. We select all unique `st_code` values.
2. We use `NOT EXISTS` to exclude stations that have an entry in the table with `line_color = 'Pink'` or `line_color = 'Blue'`.

Ask anything

ChatGPT can make mistakes. Check important info.

WRONG QUERY 2 CHAT:

Here LLM gives wrong query as it returns user alice123 who travelled in both blue and red lines.

can u write a query to give passengers which have not travelled blue line in the given date

sql

Copy

Edit

```
SELECT DISTINCT p.user_id, u.full_name, u.email, u.phone
FROM passenger p
JOIN user u ON p.user_id = u.user_id
WHERE p.user_id NOT IN (
    SELECT DISTINCT p2.user_id
    FROM passenger p2
    JOIN ticket t ON p2.pnr = t.pnr
    JOIN station s2 ON t.exit_station = s2.st_code
    WHERE s2.line_color = 'Blue'
    AND t.booking_date = '2024-03-23'
);
```

```
543 • SELECT DISTINCT p.user_id, u.full_name, u.email, u.phone
544 FROM passenger p
545 JOIN user u ON p.user_id = u.user_id
546 WHERE p.user_id NOT IN (
547     SELECT DISTINCT p2.user_id
548     FROM passenger p2
549     JOIN ticket t ON p2.pnr = t.pnr
550     JOIN station s2 ON t.exit_station = s2.st_code
551     WHERE s2.line_color = 'Blue'
552     AND t.booking_date = '2024-03-20'
553 );
554
```

Result Grid				
Filter Rows:				
Export: Export				
Wrap Cell Content: ☐				
	user_id	full_name	email	phone
▶	alice123	Alice Johnson	alice.johnson@example.com	9876543210
	bob456	Bob Williams	bob.williams@example.com	9876543211
	charlie789	Charlie Brown	charlie.brown@example.com	9876543212
	dave321	Dave Smith	dave.smith@example.com	9876543213
	emma654	Emma Davis	emma.davis@example.com	9876543214

its giving the person travelled in blue and pink line both so can u remove that person who has used both the line as they have used blue also

Here's the corrected query that ensures passengers who have traveled on both the Blue line and any other line on the given date are excluded from the results:

```
sql Copy Edit

SELECT DISTINCT p.user_id, u.full_name, u.email, u.phone
FROM passenger p
JOIN user u ON p.user_id = u.user_id
WHERE p.user_id NOT IN (
    SELECT DISTINCT p2.user_id
    FROM passenger p2
    JOIN ticket t ON p2.pnr = t.pnr
    JOIN station s2 ON t.exit_station = s2.st_code
    WHERE s2.line_color = 'Blue'
    AND t.booking_date = '2024-03-23'
)
AND p.user_id NOT IN (
    SELECT p3.user_id
    FROM passenger p3
    JOIN ticket t2 ON p3.pnr = t2.pnr
    JOIN station s3 ON t2.exit_station = s3.st_code
    WHERE t2.booking_date = '2024-03-23'
    GROUP BY p3.user_id
    HAVING COUNT(DISTINCT s3.line_color) > 1
);
```

Explanation:

1. The first **NOT IN** condition removes users who traveled on the Blue line.
2. The second **NOT IN** condition removes users who traveled on multiple different lines (including Blue) on the given date.

Now, only passengers who have not traveled on the Blue line at all will be included in the results. 🚀

📄 🗑️ 🔍 🔄 🔄

Here too alice is included in the result which is incorrect.

Result Grid 📄 🔍 Filter Rows: Export: 📄 Wrap Cell Cont

	bob456	Bob Williams	bob.williams@example.com	9876543211
	charlie789	Charlie Brown	charlie.brown@example.com	9876543212
	dave321	Dave Smith	dave.smith@example.com	9876543213

Here the query is rectified.

it is also giving wrong can u add a statement like checking the entry and exit station

Here's the corrected query that ensures passengers who have traveled on the Blue line (either at the entry or exit station) on the given date are excluded:

```
sql Copy Edit
SELECT DISTINCT p.user_id, u.full_name, u.email, u.phone
FROM passenger p
JOIN user u ON p.user_id = u.user_id
WHERE p.user_id NOT IN (
    SELECT DISTINCT p2.user_id
    FROM passenger p2
    JOIN ticket t ON p2.pnr = t.pnr
    JOIN station s_entry ON t.entry_station = s_entry.st_code
    JOIN station s_exit ON t.exit_station = s_exit.st_code
    WHERE (s_entry.line_color = 'Blue' OR s_exit.line_color = 'Blue')
    AND t.booking_date = '2024-03-23'
)
AND p.user_id NOT IN (
    SELECT p3.user_id
    FROM passenger p3
    JOIN ticket t2 ON p3.pnr = t2.pnr
    JOIN station s_entry2 ON t2.entry_station = s_entry2.st_code
    JOIN station s_exit2 ON t2.exit_station = s_exit2.st_code
    WHERE t2.booking_date = '2024-03-23'
    GROUP BY p3.user_id
    HAVING COUNT(DISTINCT s_entry2.line_color) > 1 OR COUNT(DISTINCT s_exit2.line_color) > 1
);
```

Fixes & Explanation:

- 1. Entry and Exit Check:
 - The first NOT IN now checks both entry_station and exit_station to see if they are on the Blue line.
- 2. Multi-Line Check (Excluding Blue):
 - The second NOT IN ensures that if a user has traveled on multiple lines including Blue, they are also excluded.
 - It uses HAVING COUNT(DISTINCT s_entry2.line_color) > 1 OR COUNT(DISTINCT s_exit2.line_color) > 1 to detect multi-line travel.

Now, the output will only include passengers who have not traveled on the Blue line at all—neither as an entry nor an exit station.

Correct result:
